

## Assignment – 4

Assignment Date	04/11/2022
Student Name	Rubert Sheldon A
Student Roll Number	311119104050
Maximum Marks	2 marks

### Question-1:

Pull an Image from docker hub and run it in docker playground.

### Solution:

- Pull an image *uifd/ui-for-docker* from the docker hub
- This image is used for viewing and managing the docker engine
- Use `docker pull image_name` and `docker run -it image_name` commands to • Run the above image in the Docker Playground

The screenshot shows the Docker Playground interface. On the left, there's a sidebar with a clock showing 03:57:32, a 'CLOSE SESSION' button, and a list of instances. The main area displays the details of a container named 'cddvkms0\_cddvkvm0qau000a07j5g'. It shows the IP address 192.168.0.8, memory usage at 1.24%, and CPU usage at 0.31%. Below this, there's an SSH terminal window. The terminal output shows a warning message, followed by the command `docker pull hello-world` being executed. The output indicates that the latest image from the library/hello-world repository is being pulled. Finally, the command `docker run hello-world` is executed, which results in a message about activating Windows.

### Question-2:

Create a docker file for the job portal application and deploy it in Docker desktop application.

### Solution:

- Create a docker file for build and deploy flask app.
- Use `docker build -t image_name`. In the current directory to start building the
- docker image and deploy in our local docker
- Use `docker run -p 5000:5000 image_name` to run in local system

## CODE

FROM ubuntu/apache2

FROM python

COPY ./requirements.txt /flaskApp/requirements.txt

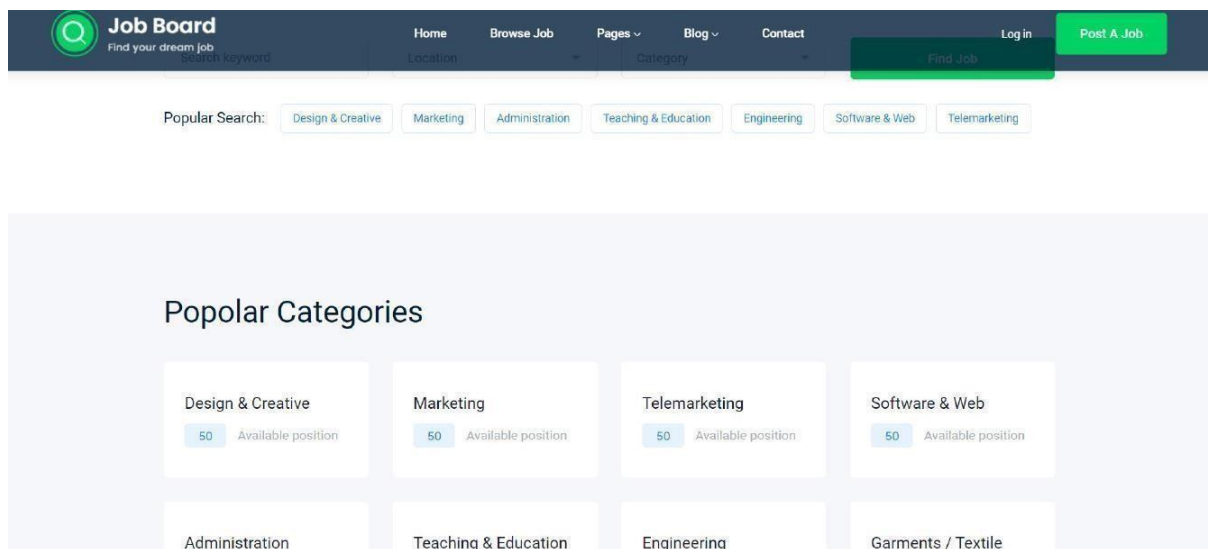

WORKDIR /flaskApp

RUN pip install -r requirements.txt

COPY . /flaskApp

ENTRYPOINT [ "python" ]

CMD ["app.py" ]

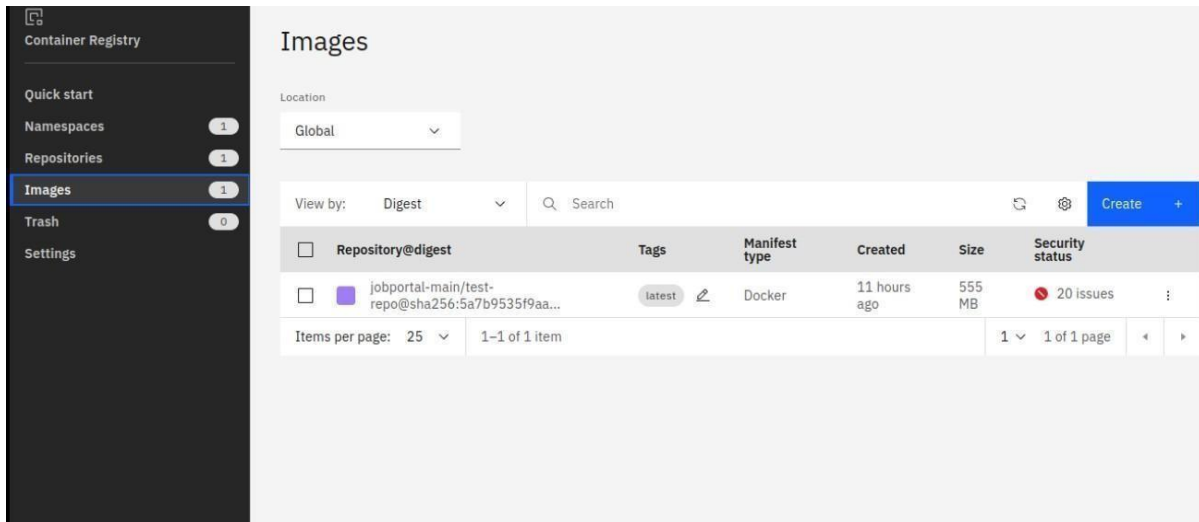

### Question-3:

Create a IBM container registry and deploy hello world app or job portal app.

### Solution:

- Log into IBM cloud
  - Create a container registry
  - Using IBM Cloud CLI, install the container registry plugin in our system
  - Push our docker image into the created container registry using docker push
- So, our job portal app is deployed in the IBM container registry

OUTPUT:

“HELLO WORLD”

#### Question-4:

Create a Kubernetes cluster in IBM cloud and deploy hello world image or job portal image and also expose the same app to run in node port.

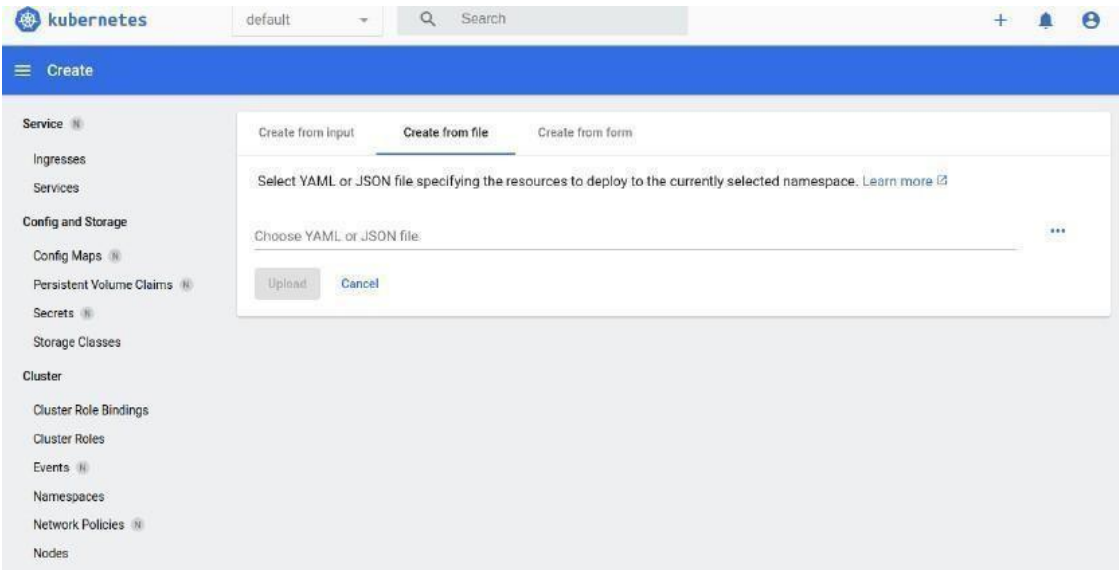

#### Solution:

- Log into IBM cloud
- Create a kubernetes
- Using IBM Cloud CLI, install the ks plugin in our system
- Create a cluster in the kubernetes
- Now, go to the kubernetes dashboard where we need to create a service based on a yml file (given below)
- In that file, we have to mention *which image we are going to use* and the *app name*
- Take the public IP address and Nodeport since we exposed the *flask app in nodeport*
- Finally, we got the url address where our flask app is hosted

#### CODE:

```
apiVersion: v1 kind:
Service metadata:
name: job-portal-app
spec: selector:
app: job-portal-app
ports: - port: 5000
type: NodePort
---
apiVersion: apps/v1
kind: Deployment
```

```
metadata:
name:
job-portal-app labels:
app: job-portal-app
spec:      selector:
matchLabels: app:
job-portal-app
replicas:      1
template:
metadata: labels:
app: job-portal-app
spec: containers:
-      name:
job-portal-app image:
image_name ports:
-      containerPort: 5000
env:
-      name:
DISABLE_WEB_AP
P
value: "false"
```

Kubernetes clusters
